

HumaneOS

**Advancing human potential
with computers**

**Hi from Belgrade,
Serbia!**

**I am Mika Jovicic, a computer
veteran and a violin player.**

HumaneOS

- 1. The big idea**
- 2. Design Principles**
- 3. Examples**
- 4. Discussion**

**30+ years
of
excitement**

Fast-forward to today

**A computer
became a
commander.**

Computers: designed to conform

 **MY operating
system
appears on a
computer when
turned on**

Core Principles

1. HumaneOS

prioritise

universal ethical

values

over anything else

2.HumaneOS

**respect human
attention**

3. Humane OS utilize serendipity

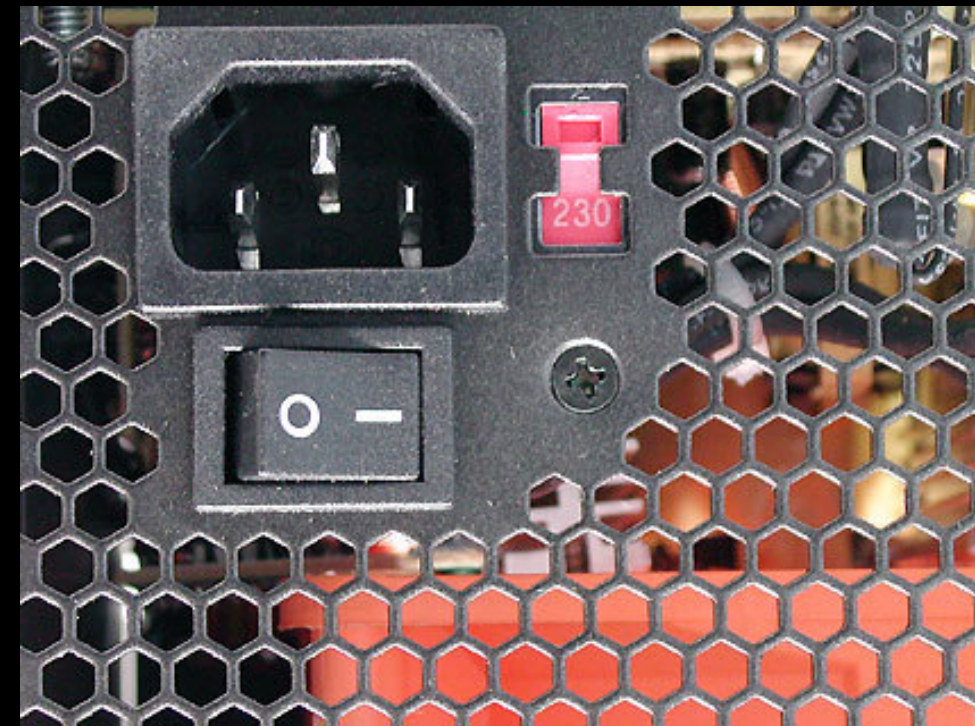

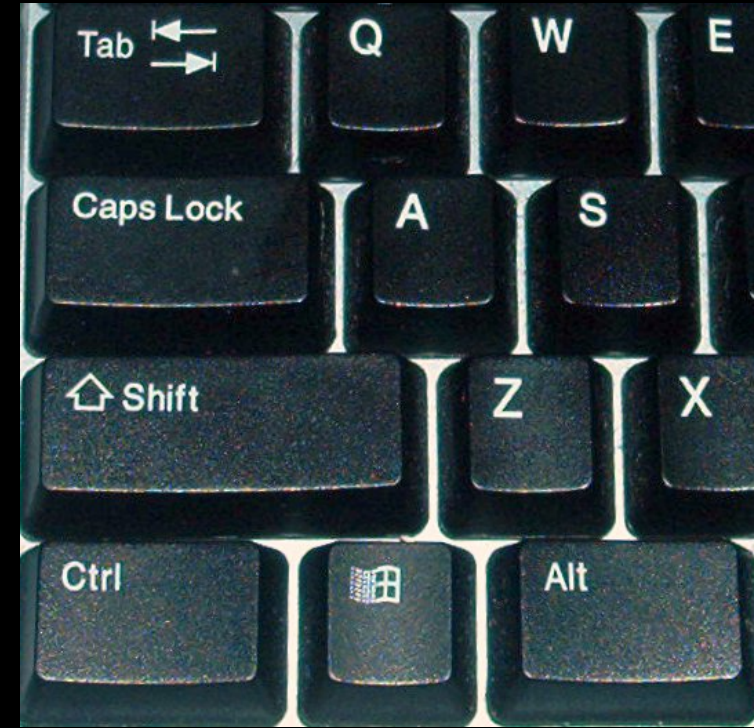

4. HumaneOS supports all human attributes

5. HumaneOS utilise positive aspects of computers

6. HumaneOS is modeless

7. HumaneOs is non-trivial and anti- intuitive

8. HumaneOS is a second- class citizen

9. HumaneOS
transparently
pushes humans
forward, to the the
values they choose

10. HumaneOS cooperate, not compete

These are not new ideas.

Examples

Pieces of a big puzzle

Close Your Eyes, Have A Break!

The current time is 17 h: 37 m.
Please take a 3min break for your eyes.

Keep your eyes closed, slightly roll your eyeballs.
By doing so, your eyes will be relaxed.

2 min: 40 sec

Please wait for the Rest Time to run out, then this window will automatically closing.

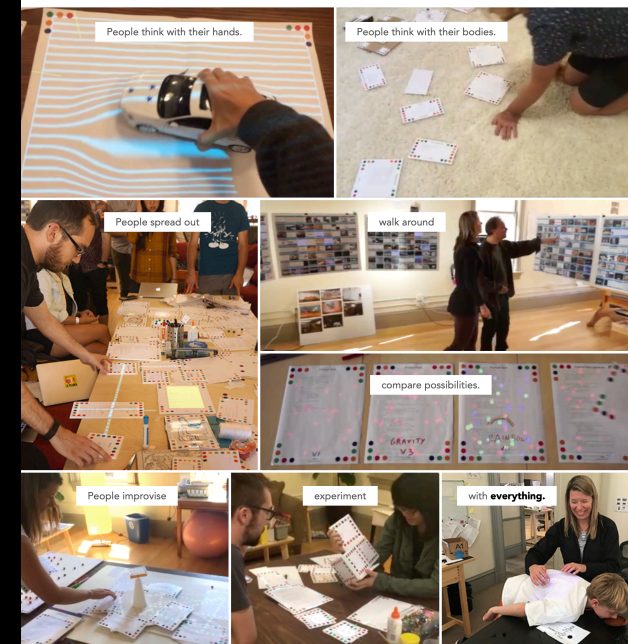

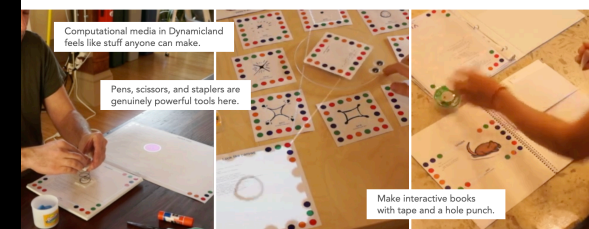

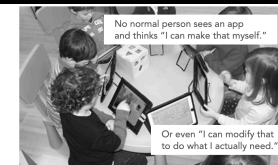

3

Thinking like a whole human.

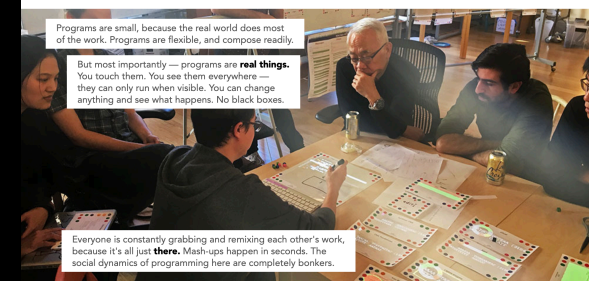

2

Agency, not apps.

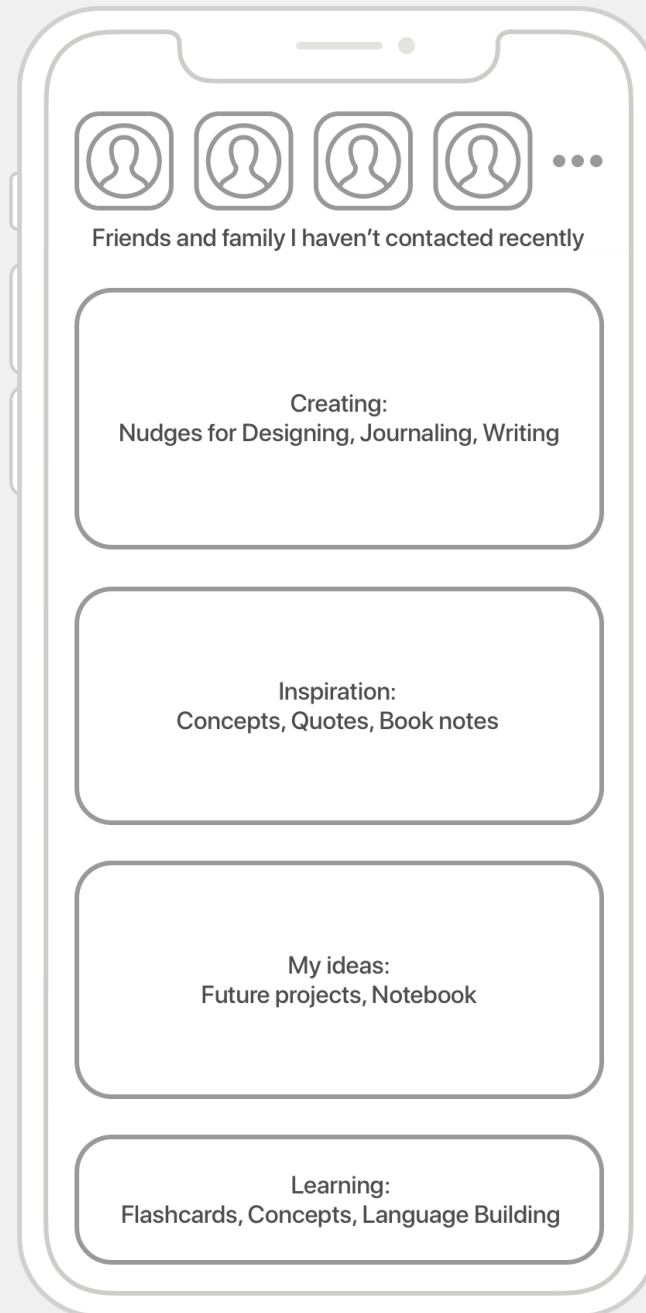

A humane dynamic medium gently leads people down a path from playing, to crafting, to remixing, to **programming**.

Programs are small, because the real world does most of the work. Programs are flexible and compose readily. But most importantly — programs are **real things**. You touch them. You see them everywhere — they can only run when visible. You can change anything and see what happens. No black boxes.

Everyone is constantly grabbing and remixing each other's work, because it's all just **there**. Mash-ups happen in seconds. The social dynamics of programming here are completely bonkers.

Actionables!

**Ethics and humane values
are first-class citizens**

Time to discuss! 🙋🏻 🙋🏼
